

GLOMEX TV ANTENNA OASIS AGC

AN AUTOMATIC GAIN CONTROL AMPLIFIER FOR OPTIMAL TV RECEPTION IN RVs AND CAMPERS

BENEFITS

Oasis AGC makes your life easier and more comfortable with the new and innovative automatic gain control amplifier. Thanks to the new amplifier you have only to turn on the TV, stay comfortably seated and enjoy your favourite FULL HD programs; Oasis AGC (diameter: 250mm / 10") will adjust by itself the gain of the TV signal to ensure the best possible reception of television broadcasts. With conventional amplifiers, in fact, you have to manually adjust the TV signal gain by lowering the amplification when the signal is high and by increasing the amplification when you are far from the TV transmitter. With the new Oasis AGC, everything will happen automatically and the innovative amplifier can be placed in a hidden location inside the RV. Oasis AGC is easy to install and provided with all necessary accessories for installation: support for roof installation, 5m (16.5') coaxial cable, 1,5M (5') TV cable and AGC amplifier. Moreover, Glomex offers a wide range of optional accessories.

DIMENSIONS

- Antenna dimensions** 250 × 205 mm
- Base diameter** 25 mm
- Antenna weight** 350g

Supports up to two TVs simultaneously

Adjustable amplifier

Energy efficient

Strong signal connection

360° signal at all directions

UV-resistant ASA material

SPECIFICATIONS

- Full 360° reception angle, ensuring consistent signal capture from all directions.
- Supports a wide frequency range from 40 MHz to 890 MHz, making it compatible with a variety of TV broadcasts.
- With an average gain of 26 dB, to boost signal strength for optimal television reception.
- The amplifier maintains a low noise factor of just 2.2 dB, ensuring clear, interference-free reception.
- Designed with a 75-ohm impedance, suited for standard TV systems and coaxial cables.
- The amplifier features adjustable gain, to suit varying signal strengths and conditions.
- There is no amplifier bypass, ensuring continuous automatic gain adjustment for optimal reception.
- Energy-efficient - consumes 20 mA of power
- It operates both 12V and 24V DC power supplies, offering flexibility for various camper setups.
- Support up to two connected TV sets simultaneously, perfect for dual-screen setups.
- The radome is made from UV-resistant ASA material, ensuring durability.
- The amplifier uses a standard F connector for easy and secure cable connections.
